PURPOSE OF WORK:

ACID JOB WITH SONIC HAMMER

PULLING UNIT:

TD:

11200'

KB ABOVE GL:

TAC:

PBTD:

11150'

PROD CSG:

SN:

PERFS:

8930' - 11075'

TBG:

PKR:

SUPERVISOR: RANDY NEWSOM

TIME

TIME

OPERATION

RIH with sonic hammer to 11083'. Load tbg to begin acid job. Well pressured up to 2500 psi. Bled well off. TOH and LD hammer and replace. Tool was plugged off with iron sulfide and scale. Run back in hole with new tool. RU Petroplex and acidized well with 5500 gals 15% HCl Acid with additives. Selectively acidized each of the nine perforated intervals using the sonic hammer to wash/inject acid across each interval. After over displacing acid wash with 200 bbls of TFW, followed with a scale inhibitor squeeze (Mixed 1 drum of Multi-Chem scale inhibitor with 100 bbls FW). With hole loaded, scale inhibitor "pill" was spotted across the gross interval, then tbg was closed and "pill" was displaced by pumping down csg. PU above perfs and SI well. SDON
