Subject: RE: Notification Drilling Permit Approval

Mandi,

We originally had planned to drill a University 9 #2923WB well. We permitted it, built the location, drilled the surface hole and set surface casing with a spudder rig. Then we decided not to drill it and replace it with an offset well which will be the University 9 #2903WC. For the #2903WC well we will use the same pad we have already built for the previous #2923WB and to save money we will use the same surface hole that was drilled for the #2923WB. Betsy simply revised the original permit we had for the #2923WB by changing the well name to the #2903WC. We no longer have a permit or plans to drill a #2923WB. Does that help explain things?

Bill
